Small Cell Fusion

Side arm mounting is no longer the only option

The platform combines small cell panels with canister antenna aesthetics for mid-pole mounting on various types of structures, enabling multi-operator deployments on existing infrastructure in space-constrained areas.

Mix and match sectors for unique coverage capabilities

The Small Cell Fusion system offers a flexible and field-operable modular design, allowing MNOs to select different panels based on each cell's requirements. This minimizes interference in their network without compromising RF performances.

Deploy today, upgrade tomorrow (or whenever needed)

We understand that change is inevitable. Our platform is modular and designed for adaptability, allowing operators to customize deployments to evolving network demands. Sectors can be easily changed at any time for future-ready network investments.
