

## **Alpha Wireless Statement of REACH Compliance**

### **Substance Registration**

Alpha Wireless Ltd. is classified as a “Downstream User” as a producer of articles. As these articles do not contain substances that are intended to be released Alpha Wireless do not have registration obligations under REACH regulations. Registration of formulations or substances used in the manufacturing of these Articles is the duty of our upstream suppliers.

Our suppliers have confirmed that all necessary registrations have taken place. As a downstream user Alpha Wireless have the right to make their uses known to our suppliers so they can include these uses in their chemical safety assessments as “identified” uses or where necessary pass this information to suppliers in their supply chain. In doing so they will provide sufficient information to allow their supplier to prepare an exposure scenario.

### **Substances subject to Authorization**

Alpha Wireless may use a substance for an authorized use provided they obtain the substance from a company that has received an authorization for this use and they use it within the conditions laid out in that authorization. The information on the uses covered by the authorization and any applicable conditions must be provided by the supplier.

### **Substances subject to Restriction**

Substances have been included in the candidate list that are identified as Substances of Very High Concern (SVHC). Alpha Wireless have contacted our suppliers for confirmation that none of the articles supplied to us contain any of these substances based on the latest Regulation (EC) 1907/2006 of the European Parliament. Alpha Wireless are in continued communication with our suppliers and will communicate any changes which may impact our products to our supply base.

A handwritten signature in black ink, appearing to read "Jim Findlay". The signature is fluid and cursive, written in a professional style.
